## 1. Size

Hornets are typically larger than wasps, with a body length of up to 1.5 inches. Wasps, on the other hand, typically have a body length of around 0.5 inches.

**Advantage: Hornet**

## 2. Nest

Hornets typically build their nests in trees or shrubs, while wasps build their nests in the ground or in man-made structures.

**Advantage: Wasp**

### **3. Venom**

Hornet venom is more potent than wasp venom, but wasps can inject more venom in a single sting.

**Advantage: Tie**

### **4. Aggression**

Hornets are more aggressive than wasps, and they are more likely to sting without provocation.

**Advantage: Hornet**

### **5. Behavior**

Hornets are social insects that live in colonies, while wasps are solitary insects that live alone.

**Advantage: Hornet**

### **6. Number of stings**

Hornets can sting multiple times, while wasps can only sting once.

**Advantage: Hornet**

### **7. Pain of sting**

Hornet stings are more painful than wasp stings.

**Advantage: Hornet**

### **8. Allergic reactions**

Hornet stings can cause more severe allergic reactions than wasp stings.

**Advantage: Hornet**

## **9. Treatment**

Hornet stings are typically treated with pain relievers and antihistamines, while wasp stings can be treated with the same medications or with a topical anesthetic.

**Advantage: Tie**

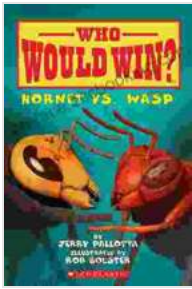

## **10. Prevention**

The best way to prevent hornet and wasp stings is to avoid them. Keep your food and drinks covered, and be careful when gardening or working outside.

**Advantage: Tie**

Based on the 10 factors we have considered, the hornet would be the clear winner in a fight against a wasp. Hornets are larger, more aggressive, and have more potent venom than wasps. They also live in colonies, which gives them a numerical advantage. However, wasps are more maneuverable, can sting multiple times, and build their nests in more difficult-to-reach locations.

Ultimately, the outcome of a fight between a hornet and a wasp would depend on a number of factors, including the size, aggression, and venom potency of the individual insects involved.
