This chapter traces the intellectual lineage of the multispecies approach, examining the foundational works of pioneers such as Donna Haraway, Bruno Latour, and Eduardo Kohn. It explores the epistemological shifts that

have led to a rejection of dualistic and hierarchical models of the world, paving the way for a more inclusive and interconnected understanding of human and nonhuman agency.

Chapter 2: Methodological Innovations

The book delves into the innovative methodologies employed by multispecies researchers. From animal ethnography and interspecies communication studies to environmental sensing and data visualizations, this chapter demonstrates how these methods have enabled researchers to gain unprecedented insights into the lives and perspectives of nonhuman others.

Chapter 3: Animal Cognition and Communication

Challenging long-held assumptions about animal intelligence, this chapter presents cutting-edge research that reveals the remarkable cognitive and communicative abilities of various animal species. It explores the implications of this research for our understanding of language, consciousness, and the intricate web of interactions within the animal kingdom.

Chapter 4: Interconnected Ecologies

The multispecies approach extends beyond the study of individual animals to examine the complex ecological relationships that shape both human and nonhuman lives.
